(75) Inventors/Applicants (for US only): **XING, Bin** [CN/CN]; Rm 502 No. 12, Lane 250 Lixilu, Shanghai (CN). **CHEN, Lechong** [CN/CN]; Rm 1003 No. 31 Lane 1555 Kaixuanbeilu, Shanghai (CN). **YU, Ke** [CN/CN]; Rm 402 No. 26 Gujinglu, Shanghai (CN). **MEI, Jianfeng** [CN/CN]; Rm 1204 Building 3, Lane 48 Jiaotongxilu,

(57) Abstract: Methods and apparatuses provide for incremental provisioning of software for a processing system. For instance, a processing system may include a machine accessible medium and a processor in communication with the machine accessible medium. In addition, instructions encoded in the machine accessible medium may cause the processing system to automatically determine whether a storage device in the processing system includes modified blocks, based at least in part on a write log file that identifies blocks that were modified during a user session on the processing system. In response to identifying at least one modified block in the storage device, the processing system may automatically replace data in the modified block with backup data from a different storage device. Other embodiments are described and claimed.
